### 25% off your kitten's BEST spay or neuter

### Why spay or neuter your kitten?

There are millions of unwanted cats euthanized every year because they do not have a home.

It will keep your pet healthier & reduce unwanted behavior, such as urine spraying, roaming, & cat fights.

Generally performed at 4 months of age, spaying or neutering can also reduce the risk of your pet developing certain cancers & other serious diseases.

### Vaccinations

(FVCRP, Felv, & Rabies)

Vaccinations are one of the most important tools in keeping your kitten healthy. Your kitten's immune system needs time to mature & become stronger. Therefore, it is **VERY IMPORTANT** that they receive the **correct vaccinations at the correct time!**

Kitten's should receive vaccinations beginning as early as 6 weeks of age, continuing every 3-4 weeks until 16 weeks of age.

### Protecting Your Kitten & Family from Parasites

Kittens are vulnerable to parasite infestations that can seriously threaten their health & your children's health! Almost all kittens have parasites because their mother transmits them through their milk. They can also acquire parasites from fleas, soil, & mosquitos (Heartworms!!!!)

With this package, your new kitten will be dewormed once with a high-quality parasite killer. In addition, they will receive the first 3 months of a flea/heartworm/roundworm/hookworm preventative.

It is important for all family members to wash their hands after playing or handling your kitten. Please don't kiss them or their mouth & pick up all feces as soon as possible.
